SUMMARY

B.S.E. software engineer, pursuing master degree of computer science at Ira A. Fulton Schools of Engineering, Arizona State University, seeking internship for 2019 summer.

EDUCATION

B.S.E., Software Engineering Sept. 2013 - Jun.2017
Nantong University, China 3.68 Major GPA

M.C.S., Computer Science(Big Data Systems) 16, Aug. 2018 - 15, Aug. 2021
Arizona State University, Tempe, AZ 3.67 First-semester GPA

PROJECTS EXPERIENCE

Design and Implementation of an Online Bookstore Management System

Undergraduate period

- To develop a Java web project on the basis of SSH framework
- Utilizing the Factory Method, such as Simple Factory and Abstract Factory, to model the complex business logic
- Operation and maintenance

The Implementation and Empirical Research of Vehicle License Plate Recognition Algorithm Based on SVM and ANN

Undergraduate period

- To develop a system which can detect the vehicles on the road surface and extract the license plate information automatically
- Implementation of machine learning algorithm including using SVM for automatic vehicle license plate detection and ANN to automatically recognize numerical and English characters
- The preliminary analysis of the test results of the whole system

T-LeadLine: Interactive Visual Analysis of Text Data (Top Topic Discovery & Event Exploration)

Graduate period

- A text data-driven event identification and exploration system
- Topic model building, events extracting and summarizing with format of abstraction, spatial-temporal information and related person network, extended with topic ranking feature
- Major techniques including Named-entity Recognition, Latent Dirichlet Allocation, detecting topic burst change (CUSUM), finding time-sensitive terms of given topic and time (TFIDF) and visualizing with D3.js.

Mental Health Topic Classification

Graduate period

- A text data-driven event identification and exploration system
- To do data-scraping on mental health such as PTSD, anxiety, depression, sexual abuse, etc. manually from internet and use topic model method, such as LDA, to extract useful information.
- Visualizing the results with D3.js and analyzing the latent pattern of the results.

HONORS

- Scholarships for Students Studying Abroad in the University of Manchester, UK
- Excellent Scholarship (10%)
- Group Award for Undergraduate Service Outsourcing Entrepreneur Competition

TECHNICAL SKILLS

Programming Skills: Java, Python, Scala, C++
Database Systems: SQL, PostgreSQL, Hadoop, Spark, MySQL
Data Visualization: D3.js
Other: MATLAB
